# Two-Way Matching Solutions

When you still need accounts payable control without a goods receipt process

## Solution overview

When you're looking for an accounts payable solution where your organisation doesn't book-in goods due to the nature of your business or based on what you buy or how you buy, B2BE has you covered. B2BE's Two-Way Matching solution means you have all the benefits of three-way matching, excluding goods receipt.

You can still manage supplier payments and processes based on B2BE's Accounts Payable AI-based matching engine and two way matching can work in parallel with three-way matching if your organisation needs to run the two accounts payable approaches for different purchasing and receipting approaches giving you flexibility while ensuring control.

## Key Features

### Controlling invoice payments without goods receipt

Some organisations do not book goods in where there's nothing to book -in such as services or where receipting isn't viable as product are shipped with mixed quantities. In these scenarios the two-way matching process still allows you to control invoice matching at line level using the requisition or purchase order to keep control.

### **Two-way cost reductions**

Two-way matching is often viewed by some organisations as a way to reduce administrative costs as resources don't need to manage booking in goods or the associated overheads of three-way matching and waiting for goods receipts. Of course, some industries lend themselves to this better than others. Should your organisation choose this approach B2BE's two-way matching ensures you still only pay based on what the requisition states with all the associated controls.

### **Multi modal matching**

The two-way matching solution can also be run in conjunction with a three-way matching solution. This means if you need to process invoices differently based on the requisition process then you can run both approaches together easily.

### **Debit or credit two way matching**

The two-way matching solution can also support a on-hit debit approach or a credit request approach with, or without, short pay mode so your organisation still gets plenty of choice in how you implement a two-way matching solution.

### **Goods receipt workflow**

Of course there may always be a need for two way matching. However, if you use B2BE's goods receipt workflow you will be able to use three-way matching and ensure you pay for what you receive based on the actual receipts using the B2BE goods receipt workflow.

### **e-Invoice document management**

Automating all your supplier's invoices, regardless how they send them, means a single stream into your two-way matching solution so the same rules and processes apply and your teams don't need to do different things based on how you received the invoice.

---

#### **About B2BE**

B2BE delivers electronic supply chain solutions globally, helping organisations to better manage their supply chain processes, providing greater levels of visibility, auditability and control. We're driven by a passion for what we do, inspired by innovation, and underpinned by a wealth of knowledge. With over 20+ years of experience, the B2BE teams operate worldwide.
